Database Design	Week 3								
Frontend Development	Week 4-5								
Backend Development	Week 6								
Integration	Week 7								
Testing	Week 8								
Deployment	Week 9								

Module Description:

1. User Authentication Module

This module handles the registration and login functionality of the system. It verifies user credentials and ensures secure access to the platform. Users can register either as a job seeker or a job provider. The module also manages password validation and role-based access.

2. Job Seeker Module

This module allows job seekers to create and manage their profiles. Job seekers can upload resumes, add skills, search for jobs, and apply for job openings. They can also track the status of their applications.

3. Job Provider Module

This module is designed for employers or recruiters. Job providers can register their companies, post job openings, and view applicants who applied for their job listings.

4. Job Management Module

This module manages all job postings on the platform. Employers can create, edit, or delete job listings. It also organizes jobs based on categories, location, and required skills.

5. Application Management Module

This module handles the job application process. It allows job seekers to apply for jobs and enables employers to review applications, shortlist candidates, and schedule interviews.
